Dear Sirs/Madam:

I have been hearing a lot about a product called EKOR which "fixes" nuclear waste in place. This product has been used successfully at the Chernobyl reactor site for over a year and has shown no signs of degradation. As you are aware, Chernobyl is the most radioactive place on this planet. Tests have shown that EKOR can contain this waste, preventing dusting and leaching of contaminants into the ground, for close to 400 years. Has the DOE looked into this amazing product? I would think that by showing how EKOR could be used at Yucca Mtn. you would have a much better chance of achieving public approval.

2 web sites for info...

<http://www.ens-news.com/ens/sep2000/2000L-09-18-02.html>

<http://www.eurotechltd.com/>

I would like to know if this product could be considered for use at Yucca Mtn, and if not, why.

550264

Thank You,

James Lee
